PROJECTS

- **TRACKER Using Java Script and Firebase**

Description:

The main motive of this project is to Display the User Location on Google Map, Calculate his Wages based on user Travelling. For some organizations there is need to monitor the users location and travelling path (eg: Medical representatives) .The locations of user are tracked by tracker android application designed by my project partner. Those locations are stored in firebase are pinpointed on map and the way is displayed using a line and the travelled Distance is calculated by which wages are decided.

- **IOT Alcohol and Fire detection System in vehicles**

Description:

Alcohol detection in vehicles which an Alcohol Sensor(MQ135) detects alcohol consumption by smell of alcohol from driver. Whenever an inebriated driver starts the vehicle, the vehicle will not start. And if driver gets into inebriated condition while driving the vehicle will come to rest, start indication lights and sends details to police authorities.

Fire detection and prevention in vehicles is the system in which Fire sensor detects fire and starts water sprinkler, which is an actuator and stop only when the fire is under control. The system also opens up the windows and emergency exits and informs the fire department.
